BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- **BLACK BORDERS**
- **TEXT CUT OFF AT TOP, BOTTOM OR SIDES**
- **FADED TEXT**
- **ILLEGIBLE TEXT**
- **SKEWED/SLANTED IMAGES**
- **COLORED PHOTOS**
- **BLACK OR VERY BLACK AND WHITE DARK PHOTOS**
- **GRAY SCALE DOCUMENTS**

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

a conductive material formed on the titanium aluminide layer.

27. (Twice Amended) A semiconductor device, comprising:

an aluminum layer over a substrate;

a dielectric layer on the aluminum layer;

an antireflective coating over said dielectric layer;

a via hole extending through the dielectric layer and said antireflective coating to a surface of the aluminum layer;

a preformed titanium aluminide layer lining at least a bottom of the via hole;

a titanium nitride layer substantially free of through cracks formed on the titanium aluminide layer;

a conductive plug material on the titanium nitride layer; and

a metallic layer on the dielectric layer and electrically connected to the plug material.

28. (Twice Amended) A semiconductor memory device, comprising:

a memory circuit region in a semiconductor substrate;

a first dielectric layer over the memory circuit region;

a first metallic layer over the first dielectric layer;

a contact interconnect between the first metallic layer and the substrate;

a second dielectric layer on the first metallic layer;

an antireflective coating over said second dielectric layer;

a via hole extending through the second dielectric layer and the antireflective coating to a surface of the second metallic layer;

a preformed titanium aluminide layer lining at least a bottom of the via hole, said preformed titanium aluminide layer being volume reduced;

a titanium compound layer formed on the titanium aluminide layer;

a conductive plug material on the titanium compound layer; and

a second metallic layer on the second dielectric layer and electrically connected to the plug material.

Sub C²

33. (Twice Amended) A memory module, comprising:

a substrate comprising a circuit board;

a plurality of memory chips mounted on the substrate and connected to form a memory circuit, wherein one or more of the memory chips comprise a random access memory (RAM) fabricated on a semiconductor substrate comprising:

a first metallic layer over a substrate;

a dielectric layer on the first metallic layer;

an antireflective coating over the dielectric layer;

a via hole extending through the dielectric layer and the antireflective coating to a surface of the first metallic layer;

a preformed titanium aluminide layer lining at least a bottom of the via hole;

a titanium compound layer formed on the titanium aluminide layer;

a conductive plug material formed on the titanium compound layer; and

B2

a second metallic layer on the dielectric layer and electrically connected to the plug material; and

an edge connector along one edge of the substrate which is wired to said memory circuit.

34. (Twice Amended) A memory module, comprising:

a substrate comprising a circuit board;

a plurality of memory chips mounted on the substrate and connected to form a memory circuit, wherein one or more of the memory chips comprise a random access memory (RAM) fabricated on a semiconductor substrate comprising:

a metallic layer over a substrate;

a dielectric layer on the metallic layer;

an antireflective coating over said dielectric layer;

a via hole extending through the dielectric layer and said antireflective coating to a surface of the metallic layer;

a preformed titanium aluminide layer lining at least a bottom of the via hole; and

a conductive material formed on the titanium aluminide layer; and
an edge connector along one edge of the substrate which is wired to said memory circuit.

35. (Twice Amended) A memory module, comprising:

a substrate comprising a circuit board;

a plurality of memory chips mounted on the substrate and connected to form a memory circuit, wherein one or more of the memory chips comprise a random access memory (RAM) fabricated on a semiconductor substrate comprising:

an aluminum layer over a substrate;

a dielectric layer on the aluminum layer;

an antireflective coating over said dielectric layer;

a via hole extending through the dielectric layer and the antireflective coating to a surface of the aluminum layer;

a preformed titanium aluminide layer lining at least a bottom of the via hole, said preformed titanium aluminide layer being volume reduced;

a titanium nitride layer substantially free of through cracks formed on the titanium aluminide layer;

a conductive plug material on the titanium nitride layer; and

a metallic layer on the dielectric layer and electrically connected to the plug material; and

an edge connector along one edge of the substrate which is wired to said memory circuit.

36. (Twice Amended) A memory module, comprising:

a substrate comprising a circuit board;

a plurality of memory chips mounted on the substrate and connected to form a memory circuit, wherein one or more of the memory chips comprise a random access memory (RAM) fabricated on a semiconductor substrate comprising:

a memory circuit region in a semiconductor substrate;

B2

- a first dielectric layer over the memory circuit region;
- a first metallic layer over the first dielectric layer;
- a contact interconnect between the first metallic layer and the substrate;
- a second dielectric layer on the first metallic layer;
- an antireflective coating over the second dielectric layer;
- a via hole extending through the second dielectric layer and the antireflective coating to a surface of the second metallic layer;
- a preformed titanium aluminide layer lining at least a bottom of the via hole, said preformed titanium aluminide layer being volume reduced;
- a titanium compound layer formed on the titanium aluminide layer;
- a conductive plug material on the titanium compound layer; and
- a second metallic layer on the second dielectric layer and electrically connected to the plug material; and
- an edge connector along one edge of the substrate which is wired to said memory circuit.

37. (Twice Amended) A computer system, comprising:

a processor; and

a random access memory (RAM) fabricated on a semiconductor chip communicating with the processor and comprising:

- a first metallic layer over a substrate;
- a dielectric layer on the first metallic layer;
- an antireflective coating over said dielectric layer;
- a via hole extending through the dielectric layer and the antireflective coating to a surface of the first metallic layer;
- a preformed titanium aluminide layer lining at least a bottom of the via hole;
- a titanium compound layer formed on the titanium aluminide layer;
- a conductive plug material formed on the titanium compound layer; and
- a second metallic layer on the dielectric layer and electrically connected to the plug material.

- B2
38. (Twice Amended) A computer system, comprising:
a processor; and
a random access memory (RAM) fabricated on a semiconductor chip
communicating with the processor and comprising:
a metallic layer over a substrate;
a dielectric layer on the metallic layer;
an antireflective coating over the dielectric layer;
a via hole extending through the dielectric layer and the antireflective coating
to a surface of the metallic layer;
a preformed titanium aluminide layer lining at least a bottom of the via hole;
and
a conductive material formed on the titanium aluminide liner.
39. (Twice Amended) A computer system, comprising:
a processor; and
a random access memory (RAM) fabricated on a semiconductor chip
communicating with the processor and comprising:
an aluminum layer over a substrate;
a dielectric layer on the aluminum layer;
an antireflective coating over the dielectric layer;
a via hole extending through the dielectric layer and the antireflective coating
to a surface of the aluminum layer;
a preformed titanium aluminide layer lining at least a bottom of the via hole,
said preformed titanium aluminide layer being volume reduced;
a titanium nitride layer substantially free of through cracks formed on the
titanium aluminide layer;
a conductive plug material on the titanium nitride layer; and
a metallic layer on the dielectric layer and electrically connected to the plug
material.

40. (Twice Amended) A computer system, comprising:
a processor; and
a random access memory (RAM) fabricated on a semiconductor chip
communicating with the processor and comprising:
- a memory circuit region in a semiconductor substrate;
 - a first dielectric layer over the memory circuit region;
 - a first metallic layer over the first dielectric layer;
 - a contact interconnect between the first metallic layer and the substrate;
 - a second dielectric layer on the first metallic layer;
 - an antireflective coating over the second dielectric layer;
 - a via hole extending through the second dielectric layer and the antireflective coating to a surface of the second metallic layer;
 - a preformed titanium aluminide layer lining at least a bottom of the via hole, said preformed titanium aluminide layer being volume reduced;
 - a titanium compound layer formed on the titanium aluminide layer;
 - a conductive plug material on the titanium compound layer; and
 - a second metallic layer on the second dielectric layer and electrically connected to the plug material.
